

Shri Vile Parle Kelavani Mandal's  
**DWARKADAS J. SANGHVI COLLEGE OF ENGINEERING**  
(Autonomous College Affiliated to the University of Mumbai)  
NAAC Accredited with "A" Grade (CGPA : 3.13)

Shri Vile Parle Kelavani Mandal's  
**Dwarkadas J. Sanghvi College of Engineering**

*(Autonomous College Affiliated to the University of Mumbai)*

**Scheme and detailed syllabus (DJ19)**

**Final Year B.Tech.**

in

**Artificial Intelligence (AI) and  
Data Science**

**(Semester VIII)**

**Proposed scheme for Final Year Undergraduate Program in Artificial Intelligence (AI) & Data Science: Semester VIII (Autonomous)**  
**(Academic Year 2024-2025)**

|--------------|--|-------|---------------|
| Theory       | a. One Term test (based on 40 % syllabus)  | 25    | 1             |
|              | b. Second Term test (next 40 % syllabus) / presentation / assignment / course project / group discussion / any other.    | 25    | 1             |
|              | Average marks of a and b   | 25    | --            |
| Audit course | Performance in the assignments / quiz / power point presentation / poster presentation / group project / any other tool. | --    | As applicable |
| Laboratory   | Performance in the laboratory and documentation.   | 25    |               |
| Tutorial     | Performance in each tutorial & / assignment.   | 25    |               |

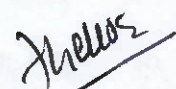

The final certification and acceptance of term work will be subject to satisfactory performance upon fulfilling minimum passing criteria in the term work / completion of audit course.

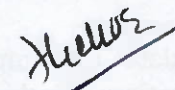

**Semester End Assessment (B):**

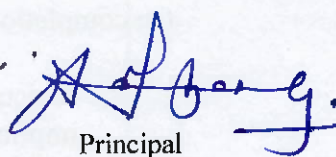

| Course                    | Assessment Tools  | Marks             | Time (hrs.)   |
|---------------------------|---|-------------------|---------------|
| Theory / * Computer based | Written paper based on the entire syllabus.   | 75                | 3             |
|                           | * Computer based assessment in the college premises.  |                   |               |
| Oral                      | Questions based on the entire syllabus.   | 25                | as applicable |
| Practical                 | Performance of the practical assigned during the examination and the output / results obtained.   | 25                | 2             |
| Oral & Practical          | Project based courses - Performance of the practical assigned during the examination and the output / results obtained. Based on the practical performed during the examination and on the entire syllabus. | As per the scheme | 2             |

**Prerequisite:** - Data Science Basics, Fundamentals of Computer Science

**Course Objectives:**

1. To understand the fundamental principles and significance of data ethics in technology and its impact on individuals and society.
2. To analyze ethical frameworks and apply them to resolve data-related dilemmas in various real-world scenarios.
3. To examine ethical challenges posed by data-driven business models and emerging technologies.
4. To explore privacy laws, data governance practices, and strategies to ensure responsible data handling and secure data storage.
5. To develop critical awareness of bias in algorithms and data, and the need for fairness, transparency, and accountability in data science practices.

**Course Outcomes:**

On completion of the course, learner will be able to

1. Articulate the importance of ethical considerations in data practices and the implications of ethical lapses.
2. Apply ethical theories and frameworks to address data-related ethical challenges in diverse scenarios.
3. Identify sources of bias in algorithms and datasets, and use appropriate techniques to mitigate them.

*Handwritten signatures in blue ink.*

4. Demonstrate an understanding of privacy laws, data governance, and the ethical obligations associated with data security.
5. Integrate data ethics principles into data-driven business practices enhancing digital trust and responsible data use.
6. Understand data governance principles, tools, and business value through case studies like the VW emissions scandal.

| <b>Data Ethics (DJ19ADC801)</b> |   |                 |
|---------------------------------|---|-----------------|
| <b>Unit</b>                     | <b>Description</b>  | <b>Duration</b> |
| 1.                              | <b>Introduction to Data Ethics:</b> Overview and Importance of Data Ethics. The significance of data ethics in modern technology, its impact on individuals and society. <b>Historical Examples of Data Ethics Violations:</b> A historical perspective on data ethics violations, such as data breaches and misuse of data. Consequences of ethical lapses and their implications for technology and society. <b>Overview of Ethical Theories:</b> Exploration of ethical theories, including utilitarianism, deontology, virtue ethics, and their application in data ethics. Applying Ethical Frameworks to Data-Related Dilemmas Practical application of ethical frameworks to analyse and address data-related ethical dilemmas. <b>Case Study:</b> Facial recognition technology by the New York Police Department (NYPD) in the wake of protests of police brutality and racial injustice in 2020 | 06              |
| 2.                              | <b>Data-driven Business Model:</b> Data as payment, good data, Data at risk, Data brokers in a grey area, a need for new business models, Needs of customers: general concern for digital surveillance, targeted ads and prices, demand for data control, act, consumers cookies and using VPM, false data on the rise, obfuscation, from lack of knowledge to resignation, pay for privacy, Best practices for data ethics, Emerging Technologies and Ethical Challenges, Examination of ethical challenges posed by emerging technologies like AI, IoT, and blockchain. <b>Case Study:</b> COVID-19 Vaccine Distribution and Equity, ethical dilemmas in cutting-edge projects  | 08              |
| 3.                              | <b>Bias &amp; Analysis:</b> Introduction and Importance of Algorithm Fairness, the reasons for unfairness, Analyzing and measuring unfairness, Sources of Bias, Dealing with Bias, Mitigating Bias , Further Considerations, addressing different types of bias, Examples, causes and detection strategies of algorithmic biases, Detecting and Addressing Bias in Data and Algorithms, Understanding the types of bias in data and algorithms (selection bias and algorithmic bias), Techniques and tools for identifying and mitigating bias in data-driven projects <b>Case Studies:</b> Aequitas - A Toolkit for Auditing Bias and Fairness in Machine Learning Models  | 08              |
| 4.                              | <b>Data Privacy:</b> Data Privacy and Legal Frameworks, Data Privacy Laws and Regulations, GDPR, CCPA, and HIPAA, Understanding the key principles and requirements of privacy laws, Data commodification's, examples of companies complying with or violating data privacy regulations, Data Collection and Storage Ethics Considerations for ethical data collection methods, including informed consent, data minimization, and transparency, Exploring fairness in machine learning models and algorithmic transparency <b>Data Storage</b>   | 08              |

|    |  |           |
|----|--|-----------|
|    | <b>and Secure Handling:</b> Encryption, and data handling protocols, Strategies for ensuring data security and integrity, Cybersecurity and Data Breaches, Handling Data Breaches Responsibly, Ethical and legal obligations following a data breach, including incident response and notification procedures. <b>Case studies:</b> Facebook's Data Privacy Controversies, Ethical data collection in various contexts.  |           |
| 5. | <b>Data Ethics and Trust:</b> Introduction to digital trust, the snowden effect, the sharing economy, ethical data use, sharing and access, ethical considerations when sharing data with partners, stakeholders, and the public, Strategies for ensuring responsible data sharing and access Best Practices for Responsible Data Use, Strategies for integrating data ethics into professional practices, software development, system design, and decision-making processes. <b>Case studies:</b> Real-world examples of organizations implementing responsible data use practices | 06        |
| 6. | <b>Data Governance and Regulation:</b> Introduction to Data Governance, Importance of Governance, Examples of Data Governance in action, The Business value of Data Governance, why data Governance is easier in the public cloud, Ingredients of Data Governance: Tools <b>Case studies:</b> The Volkswagen (VW) emissions scandal  | 03        |
|    | <b>TOTAL</b>   | <b>39</b> |

| <b>Data Ethics Tutorial (DJ19ADT801)</b> |   |
|--|---|
| <b>Sr. No.</b>                           | <b>Title of Experiment</b>  |
| 1  | Choose a real-world scenario related to social media, healthcare, education, or any other domain where data is collected, analyzed and used. Write a report that addresses the following questions:<br>1. What are the ethical implications of data collection in this scenario?<br>2. Who are the stakeholders and what are their interests?<br>3. What are the potential consequences of data use in this scenario? |
| 2  | Choose a real-world scenario related to social media, healthcare, education, or any other domain where data is collected, analyzed and used. Write a report that addresses the following questions:<br>1. Who might be harmed and who might benefit?<br>2. What ethical principles should guide the collection, analysis, and use of data in this scenario?   |
| 3  | Choose a real-world scenario related to social media, healthcare, education, or any other domain where data is collected, analyzed and used. Write a report that addresses the following questions:<br>3. How can these principles be implemented in practice?<br>4. What are your recommendations for improving the ethical considerations in data collection, analysis, and use in this scenario?                   |
| 4  | What are the potential sources of bias in data analysis and how can they be mitigated?  |
| 5  | Discuss the challenges and opportunities of implementing trust in practice, including the role of regulations, ethical frameworks, and stakeholder engagement. Provide examples of organizations that have demonstrated trust in their data practices and analyse the impact of their actions on society  |

Handwritten signature or initials in blue ink.

|   |   |
|---|---|
| 6 | Research and analyze the different types of data governance and regulation frameworks that exist (e.g. GDPR, CCPA, HIPAA, etc.)                                       |
| 7 | Research and analyze recent data privacy violations and their impact on individuals and society (e.g. Facebook-Cambridge Analytic scandal, Equifax data breach, etc.) |
| 8 | Case Study  |

Minimum 8 Tutorials from the above suggested list or any other tutorials based on syllabus will be included, which would help the learner to apply the concept learnt

### **Evaluation Scheme:**

#### **Semester End Examination (A):**

##### **Theory:**

1. Question paper will be based on the entire syllabus summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

#### **Continuous Assessment (B):**

##### **Theory:**

1. Two term tests of 25 marks and 25 marks will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

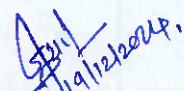

#### **Tutorial: (Term work)**

Term work shall consist of minimum 8 tutorials.

The distribution of marks for term work shall be as follows:

1. Tutorial work (Performance of tutorial): 15 Marks
2. Journal documentation (Write-up and/or Assignments): 10 marks

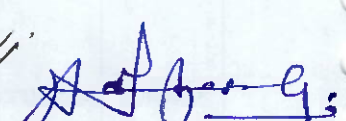

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Prerequisite:** - Fundamental of AI, Fundamentals of Machine learning

**Course Objectives:**

1. Understand computational problems and NP-Hard challenges.
2. Learn the principles of evolutionary systems and genetic algorithms.
3. Explore collective systems and swarm intelligence algorithms.
4. Study behavioral systems and neural mechanisms in AI.
5. Introduce immuno-computing and biologically inspired computing hardware.

**Course Outcomes:**

On completion of the course, learner will be able to

1. Classify computational problems and explain the significance of NP-Hard challenges.
2. Implement evolutionary algorithms using genetic representation, fitness functions, and operators.
3. Design swarm intelligence algorithms like PSO and ACO for solving optimization problems.
4. Analyze behavioral systems and neural mechanisms in AI for sensory processing and learning.
5. Apply immuno-computing for anomaly detection and explore biologically inspired computing hardware
6. Learn biologically inspired computing hardware: memristors, neuromorphic, DNA, and quantum-inspired computing.

|   | <b>TOTAL</b>  | <b>39</b>       |

### Suggested List of Experiments

| <b>Nature Inspired Computing Laboratory (DJ19ADL802)</b> |   |
|--|---|
| <b>Sr. No.</b>   | <b>Title of Experiment</b>  |
| 1  | Implement a genetic algorithm to solve a classic optimization problem such as the Knapsack Problem or Traveling Salesman Problem. |
| 2  | Experiment with different crossover and mutation operators to observe their impact on convergence speed and solution quality      |
| 3  | Simulate an ant colony optimization algorithm to find the shortest path in a graph.   |

cy

|    |  |
|----|--|
| 4  | Train a simple feedforward neural network to classify a dataset such as the Iris dataset or MNIST handwritten digits dataset.  |
| 5  | Implement a neuroevolution algorithm to evolve neural network agents for playing simple games like Tic-Tac-Toe or Flappy Bird  |
| 6  | Develop an artificial immune system algorithm for anomaly detection in a synthetic dataset or network traffic data   |
| 7  | Apply particle swarm optimization or other swarm intelligence algorithms to perform clustering on a dataset such as the Iris dataset or customer segmentation data             |
| 8  | Investigate the properties of the memristor, such as resistance modulation and memory effects, and explore its potential applications in neuromorphic computing.               |
| 9  | Investigate the properties of the memristor, such as resistance modulation and memory effects, and explore its potential applications in neuromorphic computing.               |
| 10 | Implement a quantum-inspired optimization algorithm, such as quantum annealing or quantum- inspired genetic algorithms, to solve a combinatorial optimization problem          |
| 11 | Develop a hybrid algorithm that combines multiple nature-inspired techniques, such as genetic algorithms and ant colony optimization, to solve a complex optimization problem. |

Minimum 8 experiments and mini project from the above suggested list or any other experiment based on syllabus will be included, which would help the learner to apply the concept learnt

**Evaluation Scheme:**

**Semester End Examination (A):**

**Theory:**

1. Question paper will be based on the entire syllabus summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

**Continuous Assessment (B):**

**Theory:**

1. Two term tests of 25 marks and 25 marks will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

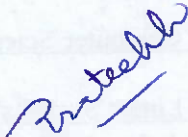

**Laboratory: (Term work)**

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

1. Laboratory work (Performance of Experiments): 15 Marks
2. Journal documentation (Write-up and/or Assignments): 10 marks

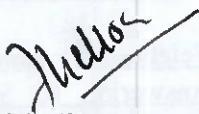

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Prerequisite:** - Machine Learning, Deep Learning and Artificial Intelligence.

**Course Objectives:**

1. To make students learn to build programs that act in a stochastic environment.
2. Students will gain a deep understanding of the fundamental concepts of Reinforcement Learning
3. Based on past experience using various Reinforcement Learning methods.

**Course Outcomes:**

On completion of the course, learner will be able to

1. Explain basic and advanced Reinforcement Learning techniques.
2. Identify suitable learning tasks to which Reinforcement learning and Deep Reinforcement Learning techniques can be applied.
3. Use appropriate Reinforcement Learning method to solve a given problem
4. Implementing Temporal Difference (TD) learning methods.
5. Apply deep reinforcement learning techniques to complex problem-solving scenarios.
6. Design and Evaluate effective policies in full reinforcement learning problems

#### Evaluation Scheme:

##### Semester End Examination (A):

##### Theory:

1. Question paper based on the entire syllabus will comprise of 5 questions (All compulsory, but with internal choice as appropriate), each carrying 15 marks, total summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

##### Laboratory:

1. Oral and practical examination will be based on the entire syllabus of course including the practical performed during laboratory sessions of course.
2. Oral examination will be of 25 marks

##### Continuous Assessment (B):

##### Theory:

Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems.

Handwritten signatures and initials in blue ink.

Total duration allotted for writing each paper is 1 hr.

Average of the marks scored in both the two tests will be considered for final grading.

**Laboratory: (Term work)**

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

1. Laboratory work (Performance of Experiments): 15 Marks
2. Journal documentation (Write-up and/or Assignments): 10 marks

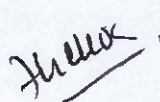

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Prerequisite:** Operating System Fundamentals.

**Course Objectives:**

1. To learn concepts of parallel processing as it pertains to high-performance computing.
2. To design, develop and analyze parallel programs on high performance computing resources using parallel programming paradigm
3. To build real-world applications and case studies to understand the practical challenges and solutions in the HPC domain.

**Course Outcomes: On completion of the course, learner will be able to:**

1. Understand different parallel processing approaches
2. Identify and evaluate the platforms and technologies involved in achieving high performance computing (HPC).
3. Explore GPU and CUDA Programming.
4. Know the principles of Grid and Cloud Computing with practical examples and applications.
5. Analyze the performance measures in high performance computing.
6. Discover the advanced topic in GPU including libraries and framework.

**Detailed Syllabus: High Performance Computing (DJ19ADC8012)**

| Unit | Description  | Duration |
|------|--|----------|
| 1    | <p><b>Introduction to Parallel Processing:</b><br/>                     Parallel processing, Levels of Parallelism, Models (SIMD, MIMD, SIMT, SPMD, Data Flow Models, Demand-driven Computation). Loosely coupled and Tightly coupled. Parallel Architecture (Interconnection network, processor Array, Multiprocessor), Challenges in Parallel Computing, Performance Metrics, Distributed vs. Parallel architectures.</p>  | 04       |
| 2    | <p><b>Introduction to High Performance Computing:</b><br/>                     Principles of HPC, HPC Architectures, HPC vs Parallel Processing, Data partitioning Techniques: Block, cyclic, and block-cyclic partitioning, Domain Decomposition: Spatial, temporal, and functional decomposition, Load balancing, Case Study: Partitioning strategies for matrix multiplication. Communication Models: Shared memory vs. message passing. Point-to-Point Communication: Send/Receive operations in MPI. Collective Communication: Broadcast, scatter, gather, and reduction operations in MPI (MPI_Reduce)</p> | 06       |
| 3    | <p><b>GPU and CUDA Programming:</b><br/>                     Overview of GPU, evolution of GPU, CPU vs. GPU, overview of CUDA: Features, Benefits, Architecture. Programming Model CUDA: Kernels and kernel launches, Thread and block indexing, CUDA Memory Management: Memory Hierarchy and Memory Management, Case Studies: computational biology, data analytics, and machine learning.</p>  | 08       |
| 4    | <p><b>Grid and Cloud Computing:</b><br/>                     Data &amp; Computational Grids, Grid Architectures and its relation to various Distributed Technologies, Examples of The Grid Computing, Cloud Computing, High Performance Cloud Computing (HPC2), CloudTensor Processing Units (TPUs).</p>   | 07       |
| 5    | <p><b>Performance Optimization:</b><br/>                     Speedup, Efficiency and Scalability, Amdahl's Law, Gustafson's Law, Weak vs. Strong Scaling, Performance Bottlenecks, Data Races and Determinism, Data Race Avoidance, Profiling and performance analysis tools for GPUs, Techniques for optimizing GPU performance (warp divergence, loop unrolling, vectorization), Memory bandwidth optimization techniques, Advanced GPU programming concepts (shared memory atomics, warp shuffling).<br/>                     Case Studies: Scientific Computing with CUDA/Real-life application</p>          | 08       |
| 6    | <p><b>Advanced Topics in GPU:</b><br/>                     Introduction to GPU accelerated libraries (cuBLAS, cuDNN, cuGraph), GPU computing frameworks (TensorFlow, PyTorch) and their integration with GPUs, Introduction to GPU clusters and distributed GPU computing, Cluster Setup &amp; its Advantages. Case studies : Real-world applications of GPU computing.</p>  | 06       |
|      |  | 39       |

## List of Experiments:

| High Performance Computing Laboratory (DJ19ADL8012) |  |
|---|--|
| Sr. No.   | Suggested Experiments  |
| 1   | Set up the CUDA environment, install the CUDA Toolkit, and write a basic CUDA program to understand the CUDA development environment.  |
| 2   | Implement vector addition using CUDA to introduce students to parallelism, thread management, and memory allocation in GPU programming.  |
| 3   | Develop a CUDA program for matrix multiplication to understand parallelism and optimization techniques in GPU computing.   |
| 4   | Apply CUDA for image processing tasks, like blurring and edge detection, to learn how to process images efficiently using GPU parallelism.                                     |
| 5   | Implement parallel reduction operations (e.g., sum, min, max) to grasp the concept of efficient parallel reduction.  |
| 6   | Explore parallel sorting algorithms using CUDA, comparing their performance with CPU based sorting and optimizing CUDA sorting.  |
| 7   | Employ CUDA to perform a Monte Carlo simulation for estimating mathematical constants or solving real-world problems to understand the power of GPU parallelism.               |
| 8   | Experiment with CUDA to implement concurrent data structures using locks and atomic operations to learn how to manage data concurrently.                                       |
| 9   | Optimize the reduction step in machine learning algorithms using CUDA, focusing on techniques for efficient large-scale data processing.                                       |
| 10  | Integrate CUDA-accelerated code with data science frameworks like TensorFlow or PyTorch to develop and run GPU-accelerated machine learning models for practical applications. |
| 11  | Perform the Log Analysis-Based Resource and Execution Time Improvement   |

Batch wise laboratory work of minimum eight experiments from the above suggested list or any other experiment based on syllabus will be included, which would help the learner to apply the concept learnt

#### **Evaluation Scheme:**

Semester End Examination (A):

Theory:

1. Question paper will be based on the entire syllabus summing up to 75 marks.

Handwritten signatures and initials.

2. Total duration allotted for writing the paper is 3 hrs.

Continuous Assessment (B):

**Theory:**

1. Two term tests of 25 marks and 25 marks will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.

2. Total duration allotted for writing each of the paper is 1 hr.

3. Average of the marks scored in both the two tests will be considered for final grading.

**Laboratory: (Term work)**

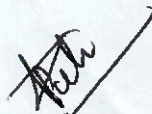

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

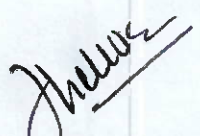

1. Laboratory work (Performance of Experiments): 15 Marks

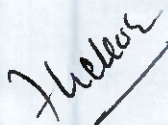

2. Journal documentation (Write-up and/or Assignments): 10 marks

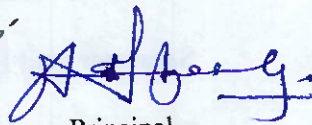

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Prerequisite:** - Fundamental of AI, Machine learning

**Course Objectives:**

1. To understand the fundamentals of AI and its applications in healthcare.
2. To explore various AI techniques such as machine learning, deep learning, and natural language processing (NLP) in healthcare.
3. To analyze and work with healthcare data, including electronic health records, imaging data, and genetic information.
4. To develop AI models to assist in diagnosis, treatment planning, and patient monitoring.
5. To understand ethical, privacy, and regulatory considerations in applying AI to healthcare.

**Course Outcomes:**

On completion of the course, learner will be able to

1. Apply AI techniques to solve healthcare challenges and improve patient care.
2. Develop machine learning and deep learning models for healthcare applications.
3. Analyze and process healthcare data for diagnosis and prediction.
4. Implement AI solutions for medical imaging, diagnostics, and personalized treatment.
5. Assess ethical and privacy considerations in the deployment of AI solutions in healthcare.
6. Understand AI innovations in personalized medicine, drug discovery, remote monitoring, and healthcare operations

## Suggested List of Experiments

| AI in Healthcare Laboratory (DJ19ADL8013) |   |
|---|---|
| Sr. No.                                   | Title of Experiment   |
| 1   | Exploring healthcare datasets (EHR and imaging data).   |
| 2   | Data preparation and pre-processing for healthcare applications.                              |
| 3   | Building a classification model for disease prediction.                                       |
| 4   | Implementing clustering techniques for patient segmentation.                                  |
| 5   | Model evaluation for healthcare classification problems.                                      |
| 6   | Building a CNN model for image classification (e.g., X-ray, MRI).                             |
| 7   | Transfer learning using pre-trained CNNs for medical imaging.                                 |
| 8   | Medical image segmentation with U-Net architecture.   |
| 9   | Text pre-processing and tokenization for clinical text.                                       |
| 10  | Named entity recognition in clinical notes.   |
| 11  | Evaluating model fairness and bias in healthcare AI models.                                   |
| 12  | Analysing privacy concerns in healthcare datasets and applying data anonymization techniques. |
| 13  | Mini Project  |

Minimum 8 experiments and mini project from the above suggested list or any other experiment based on syllabus will be included, which would help the learner to apply the concept learnt

Continuous Assessment (B):

### Theory:

1. Two term tests of 25 marks and 25 marks will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

### Laboratory: (Term work)

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

1. Laboratory work (Performance of Experiments): 15 Marks
2. Journal documentation (Write-up and/or Assignments): 10 marks

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Prerequisite:** - Machine Learning, Deep Learning, Python Programming

**Course Objectives:**

1. To understand how to explain machine learning models with various techniques
2. To familiarize concepts related to Explainable Artificial Intelligence (XAI) and interpretable methods, with emphasis on how to build a trustworthy AI system
3. To understand the performance of a machine learning model and its ability to produce explainable and interpret able predictions

**Course Outcomes:**

On completion of the course, learner will be able to

1. Understand the concept and importance of explainable AI .
2. Differentiate Between Interpretability and Explainability in Machine Learning Models
3. Apply XAI Techniques on Machine Learning Models
4. Evaluate the Interpretability and Trustworthiness of AI Models
5. Explain the Role of Attention Mechanisms and Feature Visualization in Deep Learning Models
6. Apply XAI Techniques in Healthcare and Autonomous Systems

### Suggested List of Experiments

| <b>Explainable AI Laboratory (DJ19ADL8014)</b> |   |
|--|---|
| <b>Sr. No.</b>                                 | <b>Title of Experiment</b>  |
| 1  | Explore how different types of machine learning models (e.g., decision trees, random forests, neural networks) provide different levels of interpretability and explainability. |
| 2  | Train a linear regression model and apply coefficients interpretation.  |
| 3  | Implement a Generalized Additive Model (GAM) for regression and interpret the individual feature effects using partial dependence plots (PDP).                                  |

Handwritten signatures and initials in blue ink.

|   |   |
|---|---|
| 4 | Apply sensitivity analysis to a trained model (e.g., random forest or neural network) to identify the most influential features in prediction outcomes. |
| 5 | Apply LIME to interpret local model decisions and visualize results.  |
| 6 | Use SHAP to explain global and local predictions and analyze feature importance.  |
| 7 | Apply DiCE to generate counterfactual explanations for a black-box model (e.g., customer churn prediction).   |
| 8 | Test a Power Quality Disturbance (PQD) classification model and evaluate its performance using trustworthiness metrics.                                 |
| 9 | Use SHAP or LIME to explain the model's predictions and evaluate its trustworthiness for use by physicians and patients.                                |

All eight experiments from the above suggested list or any other experiment based on syllabus will be included, which would help the learner to apply the concept learnt

### Evaluation Scheme:

#### Semester End Examination (A):

##### Theory:

1. Question paper will be based on the entire syllabus summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

#### Continuous Assessment (B):

##### Theory:

1. Two term tests of 25 marks and 25 marks will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

#### Laboratory: (Term work)

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

1. Laboratory work (Performance of Experiments): 15 Marks
2. Journal documentation (Write-up and/or Assignments): 10 marks

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work and upon fulfilling minimum passing criteria in the term work.

**Pre-requisites:** Basic concepts of Management.

**Objectives:**

1. To familiarize the students with the use of a structured methodology/approach for every unique project undertaken, utilizing project management concepts, tools and techniques.
2. To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

**Outcomes:** On completion of the course, learners will be able to:

1. Explain project management life cycle and the various project phases as well as the role of project manager.
2. Apply selection criteria and select an appropriate project from different options.
3. Create a work breakdown structure for a project and develop a schedule based on it. Manage project risk strategically.
4. Use Earned value technique and determine & predict status of the project.
5. Capture lessons learned during project phases and document them for future reference.

### Evaluation Scheme:

#### Semester End Examination (A):

##### Theory:

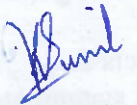

1. Question paper based on the entire syllabus will comprise of 5 questions (All compulsory, but with internal choice as appropriate), each carrying 15 marks, total summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

#### Continuous Assessment (B):

##### Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

**Pre-requisites:** Basic Knowledge of Algebra, Probability and Statistics.

**Objectives:**

1. Overview of Indian financial system, instruments and market.
2. Basic concepts of value of money, returns and risks, corporate finance, working capital and its management.
3. Knowledge about sources of finance, capital structure, dividend policy.

**Outcomes:** On completion of the course, learner will be able to:

1. Understand Indian finance system.
2. Apply concepts of time value money and risk returns to product, services and business.
3. Understand corporate finance; evaluate and compare performance of multiple firms.
4. Take Investment, finance as well as dividend decisions.

| Detailed Syllabus (Unit wise) |  |                   |
|-------------------------------|--|-------------------|
| Unit                          | Description  | Duration in Hours |
| 01                            | <b>Overview of Indian Financial System:</b> Characteristics, Components and Functions of Financial System. Financial Instruments: Meaning, Characteristics and Classification of Basic Financial Instruments Equity Shares, Preference Shares, Bonds-Debentures, Certificates of Deposit, and Treasury Bills. Financial Markets: Meaning, Characteristics and Classification of Financial Markets - Capital Market, Money Market and Foreign Currency Market Financial Institutions: Meaning, Characteristics and Classification of Financial Institutions-Commercial Banks, Investment-Merchant Banks and Stock Exchanges | 07                |

|    |  |    |
|----|--|----|
| 02 | <b>Overview of Corporate Finance:</b> Objectives of Corporate Finance; Functions of Corporate Finance Investment Decision, Financing Decision, and Dividend Decision. Financial Ratio Analysis:<br><b>Overview of Financial Statements:</b> Balance Sheet, Profit and Loss Account, and Cash Flow Statement; Purpose of Financial Ratio Analysis; Liquidity Ratios; Efficiency or Activity Ratios; Profitability Ratios; Capital Structure Ratios; Stock Market Ratios; Limitations of Ratio Analysis  | 08 |
| 03 | <b>Concepts of Returns and Risks:</b> Measurement of Historical Returns and Expected Returns of a Single Security and a Two-security Portfolio; Measurement of Historical Risk and Expected Risk of a Single Security and a Two-security Portfolio. Time Value of Money: Future Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Present Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Continuous Compounding and Continuous Discounting.   | 07 |
| 04 | <b>Working Capital Management:</b> Concepts of Meaning Working Capital; Importance of Working Capital Management; Factors Affecting an Entity's Working Capital Needs; Estimation of Working Capital Requirements; Management of Inventories; Management of Receivables; and Management of Cash and Marketable Securities. Capital Budgeting: Meaning and Importance of Capital Budgeting; Inputs for Capital Budgeting Decisions; Investment Appraisal Criterion-Accounting Rate of Return, Payback Period, Discounted Payback Period, Net Present Value(NPV), Profitability Index, Internal Rate of Return (IRR), and Modified Internal Rate of Return (MIRR). | 09 |
| 05 | <b>Capital Structure:</b> Factors Affecting an Entity's Capital Structure; Overview of Capital Structure Theories and Approaches Net Income Approach, Net Operating Income Approach; Traditional Approach, and Modigliani-Miller Approach. Relation between Capital Structure and Corporate Value; Concept of Optimal Capital Structure Dividend Policy: Meaning and Importance of Dividend Policy; Factors Affecting an Entity's Dividend Decision; Overview of Dividend Policy Theories and Approaches- Gordon's Approach, Walter's Approach, and Modigliani-Miller Approach   | 08 |

**Objectives:**

1. To acquaint with the concept of key drivers of supply chain performance and their inter-relationships with strategy.
2. To acquaint with the design problems and develop an understanding of information technology in supply chain optimization.
3. To acquaint with the complexity of inter-firm and intra-firm coordination in implementing programs such as e-collaboration, quick response, jointly managed inventories and strategic alliances.

**Outcomes:** On completion of the course, learner will be able to:

1. Demonstrate the functional strategy map of supply chain management.
2. Analyze the determinants of Supply Chain and Transportation networks design.
3. Demonstrate the need of coordination and sourcing decisions in supply chain.
4. Understand pricing, revenue management and role of IT in supply chain.
5. Gain knowledge of various sustainability aspects of a supply chain.

**Objectives:**

1. Understanding, defining and differentiating different types of intellectual properties (IPs)
2. Assessing different IP management (IPM) approaches
3. Exposure to the Legal management of IP and understanding of real life practice of IPM.
4. Understanding post-grant processes related to Intellectual Property.

**Outcomes:** On completion of the course, learner will be able to:

1. Recognize the crucial role of IP for the purposes of product and technology development.
2. Understand how and when to file a patent.
3. Apply the knowledge to understand the entire ecosystem.
4. Derive value from IP and leverage its value in new product and service development.
5. Identify appropriate Intellectual Property Right for a creation.

| Detailed Syllabus: (unit wise) |  |                   |
|--------------------------------|--|-------------------|
| Unit                           | Description  | Duration in hours |
| 1                              | <b>Concept of Intellectual Property Law</b><br><br>Idea/ Expression dichotomy, Introduction and the need for intellectual property right (IPR), Intellectual Property laws, IPR in India: Genesis and development, IPR abroad, Major International Instruments concerning Intellectual Property Rights: Paris Convention, the Berne Convention, the Universal Copyright Convention, the WIPO | 6                 |

|   |   |    |
|---|---|----|
|   | Convention, the Patent Cooperation Treaty, the TRIPS Agreement, incentive theory, Types of IPR, India's New National IP Policy, 2016, Govt. Schemes in IPR IP   |    |
| 2 | <b>Patents and Trademarks</b><br><br>Elements of Patentability: Novelty, Non-Obviousness, Industrial Application, Non-Patentable Subject Matter, Registration Procedure, Rights and Duties of Patentee, Assignment and License, Restoration of Lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties, Patent Office and Appellate Board, Case Study of Existing Patents related to software, healthcare, devices.<br><br>Concept of Trademarks, Different Kinds of Marks: (Brand names, Logos, Signatures, Symbols, Well-known marks, Certification marks, Service marks), Non-Registrable Trademarks, Registration of Trademarks, Rights of Holder and Assignment and Licensing of Marks, Infringement, Remedies & Penalties, Trademarks Registry and Appellate Board. | 11 |

### Evaluation Scheme:

#### Semester End Examination (A):

##### Theory:

1. Question paper based on the entire syllabus will comprise of 5 questions (All compulsory, but with internal choice as appropriate), each carrying 15 marks, total summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

#### Continuous Assessment (B):

##### Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

**Objectives:**

1. To understand the development and judicial setup of Labour Laws.
2. To learn the laws relating to Industrial Disputes, Social Security and Working conditions.
3. To analyse the laws related to corporate governance in different settings.
4. To develop awareness of legal principles involved in economic relationships and business transactions.
5. To develop an understanding of free enterprise system and legal safeguards of the same.

**Outcomes:** On completion of the course, learner will be able to:

1. Illustrate the role of trade union in the industrial setup.
2. Understand the important causes, impact of industrial disputes and settlement procedures.
3. To provide in-depth understanding of corporate social responsibility.
4. Apply concepts, principles and theories to understand simple business laws.
5. Analyse the principle of international business and strategies adopted by firms to expand globally

**Course Objectives:** To introduce the students to professional engineering practice by providing them with an opportunity to work on an open-ended engineering problem. Typically, the students would apply knowledge from different areas or courses, which they have studied in their curriculum using methods, tools, and techniques, which they learned to a real-world scenario. Students would have to apply not only their engineering knowledge and proficiencies (hard skills), but also to demonstrate their competence in generic, professional skills (soft skills). It also emphasizes the importance of life-long learning as a fundamental attribute of graduate engineers.

**Course Outcomes:** On completion of the course, learner will be able to:

1. Develop the proposed solution using appropriate techniques.
2. Test the developed system for its correctness using appropriate techniques.
3. Work effectively as a member of the team.

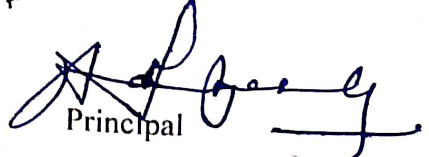

**Guidelines:**

1. The department must allocate 2 days in the Semester VIII every week.
2. Students will do coding and testing in Semester VIII.
3. Each group along with its guide/mentor shall identify an appropriate technique/s for testing the developed system.
4. The project assessment for term work will be done at least two times at department level by giving presentation to panel members which consist of at least three (3) members as Internal examiners (including the project guide/mentor) appointed by the Head of the department of respective Program.
5. A report is to be prepared summarizing the findings of the literature survey, coding and testing.
6. Every team must publish their work in national / international conference/journals (if possible, publish in Scopus indexed journals) or file a patent.
