Dwarkadas J. Sanghvi College of Engineering

(Autonomous College Affiliated to the University of Mumbai)

Scheme and detailed syllabus

Final Year B.Tech

in

**Computer Science and Engineering
(IoT and Cyber Security with Block Chain
Technology)
(Semester VIII)**

Prepared by:- Board of Studies in Computer Science and Engineering (IoT and Cyber
Security with Block Chain Technology)

With effect from the Academic Year: 2024-2025

**Scheme for Final Year B. Tech. in Computer Science and Engineering (IoT and Cyber Security with Block Chain Technology) Semester VIII (Autonomous)
(Academic Year-2024-2025)**

Program: B.Tech. in Computer Science and Engineering (IoT and Cyber Security with Block Chain Technology)						Final Year		Semester: VIII	
Course : Social Network Analysis						Course Code: DJ19ICC801			
Course: Social Network Analysis Laboratory						Course Code: DJ19ICL801			
Teaching Scheme (Hours / week)				Evaluation Scheme					
				Semester End Examination Marks (A)			Continuous Assessment Marks (B)		
Lectures	Practical	Tutorial	Total Credits	Theory			Term Test 1	Term Test 2	Average
				75			25	25	25
				Laboratory Examination			Term work		Total Term work
				Oral	Practical	Oral & Practical	Laboratory Work	Tutorial / Mini project / presentation/ Journal	
				25	-	-	15	10	25

Pre-requisite:

1. Computer Networks
2. Machine Learning

Course Objectives: The objective of the course is

1. To aware the learners with the concept of social media analytics and understand its significance.
2. To enable the learners to develop skills required for analyzing the effectiveness of social media.
3. To familiarize the learners with different tools of social media analytics
4. To equip students with the skills to analyze and interpret social networks using quantitative and qualitative methods

Course Outcomes: On completion of this course, learner will be able to

1. Understand the fundamental concepts, tools, and techniques for analyzing social networks.
2. Illustrate large-scale network data and mechanisms used for network growth models.
3. Apply link analysis techniques to real-world applications
4. Explore the concepts behind community detection in social networks
5. Engage in research projects that explore novel approaches to link prediction, encouraging innovation and critical thinking in the application of SNA techniques.
6. Implement appropriate anomaly detection method on a networks.

cy
73

Detailed Syllabus		
Unit	Description	Duration
1	Networks and Society Introduction, Use of social networks, defining a network, types of network (link-centric, node and link centric, local view, temporal view, generalization, real-world network), levels of social network analysis, graph visualization tools (web-based and standalone), applications. Network Measures: Network basics, node centrality, assortativity, transitivity and reciprocity, similarity, degeneracy.	06
2	Network Growth Models Properties of real world networks, Random Network Model: Degree Distribution of Random Network, Binomial to Poisson Distribution, Evolution of a Random Network, Average Path Length, Clustering Coefficient, Random Network vs. Real-world Network, Ring Lattice Network Model, Watts- Strogatz Model: Network Formation, Preferential Attachment Model: Network Formation, Degree Dynamics, Limitations of BA Model.	08
3	Link Analysis Application of link analysis, Signed networks: Balance Theory of Undirected Signed Networks, Status Theory of Signed Networks, Triad Balance vs Status, Strong and Weak Ties: Strength of a Tie, Triadic Closure, Dunbar Number, Local Bridges and Importance of Weak Ties, PageRank, Personalised PageRank, DivRank, SimRank, PathSim.	06
4	Community Detection Application of community detection, types of communities, community detection methods, Disjoint Community Detection: Node-centric community detection, modularity and community detection, Overlapping Community Detection: Clique Dynamics, Local Community Detection.	08
5	Link Prediction Link prediction using Graph Neural Networks (GNNs), Dynamic Network analysis using Graph Convolutional Networks (GCNs) and GraphSAGE, Graph Attention Networks (GATs), Autoencoders for Link Prediction- Graph Autoencoders (GAE), Applications of link prediction	05
6	Anomaly Detection in Networks Anomaly in Static Networks: Plain and attributed networks, relational learning, Anomaly in Dynamic Networks: Preliminaries, feature and decomposition-based approaches. Recurrent Neural Networks (RNNs) for Temporal Anomaly Detection and Time-Series Anomaly Detection	06
Total		39

Handwritten signatures in blue ink.

List of Laboratory Experiments:

Sr. No.	Suggested Experiments
1	To create and analyze a graph using Social Network and Gephi Tool.
2	To build a network and network measures using NetworkX: Degree & Degree Distance, Clustering
3	To build a network and network measures using NetworkX Node Centrality measure
4	To perform data collection-Select the social media platforms of your choice (Twitter, Facebook, LinkedIn, YouTube, Web blogs etc) ,connect to and capture social media data for business (scraping, crawling, parsing).
5	To develop Structure based social media analytics model for any business. (e.g. Structure Based Models -community detection, influence analysis)
6	To Implement random scale-free network growth model on network science. (Barabasi-Albert).
7	To Implement clustering network growth model on network science (Watts Strogatz Network).
8	To implement link analysis of random walk page rank algorithm.
9	To perform and evaluate link prediction using Graph Neural Network(GNN)
10	To perform and evaluate link prediction using Graph Convolutional Network(GCN)
11	To perform and evaluate link prediction using Graph Attention network (GAT)
12	To study and implement Graph Representation learning.:DeepWalk
13	To study and implement f Graph Embedding using Node2Vec
14	To implement a Recurrent Neural Network (RNN) to detect temporal anomalies in sequential data, such as time-series data, and evaluate its performance in identifying anomalies based on historical trends.
15	To use Recurrent Neural Network (RNN) auto encoder for time-series anomaly detection.

Any other experiment based on syllabus may be included, which would help the learner to understand topic/concept.

Books Recommended:

Text Books:

Evaluation Scheme:

Semester End Examination (A):

Theory:

1. Question paper will be based on the entire syllabus summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

Laboratory:

Oral examination will be based on the entire syllabus including, the practical performed during laboratory sessions.

Continuous Assessment (B):

Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 03 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading

Cy
71

Laboratory: (Term work)

Term work shall consist of minimum 8 experiments.

The distribution of marks for term work shall be as follows:

- i. Laboratory work (Performance of Experiments): 15 Marks
- ii. Journal documentation (Write-up and/or Assignments): 10 marks

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work, and upon fulfilling minimum passing criteria in the term work.

Course : Ethical Hacking and Digital Forensics				Course Code: DJ19ICC802						
Course: Ethical Hacking and Digital Forensics Laboratory				Course Code: DJ19ICL802						
Teaching Scheme (Hours / week)				Evaluation Scheme						
Lectures	Practical	Tutorial	Total Credits	Semester End Examination Marks (A)			Continuous Assessment Marks (B)			Total marks (A+ B)
				Theory			Term Test 1	Term Test 2	Average	
				75			25	25	25	100
				Laboratory Examination			Term work			Total Term work
				Oral	Practical	Oral & Practical	Laboratory Work	Tutorial / Mini project / presentation / Journal	50	
3	2	-	4	25	-	-	15	10	25	

Prerequisite:

1. Security in Computing
2. Computer Networks
3. Vulnerability Assessment and Penetration Testing

Course Objectives: The objective of the course is

1. To understand ethical hacking and different phases of an attack.
2. To recognize the System Hacking strategies in Ethical manner.
3. To create awareness of Network Hacking and its issues.
4. To work with different tools and techniques associated with Cyber Forensics.

Course Outcomes: On completion of this course, learner will be able to

1. Define the concept of ethical hacking and explore different phases of it.
2. Apply the System Hacking strategies in Ethical manner.
3. Analyze and mitigate Network Hacking issues.
4. Understand the fundamental of Cyber Forensics
5. Examine the tools and techniques used for acquiring digital evidence.
6. Assess and authenticate digital evidence data.

Detailed Syllabus		
Unit	Description	Duration
1	Introduction to Ethical Hacking Introduction- Ethical Hacking Terminology, Types of hacking technologies, Phases of ethical hacking, Hacking Impacts, The Hacker Framework: Planning the test, Sound Operations, System Hacking, Malware Threats, Sniffing, Email Tracking.	4

(Handwritten signature)

2	Enumeration and vulnerability analysis Enumeration Concepts - NetBIOS Enumeration - SNMP, LDAP, NTP, SMTP and DNS Enumeration - Vulnerability Assessment Concepts - Desktop and Server OS Vulnerabilities - Windows OS Vulnerabilities - Tools for Identifying Vulnerabilities in Windows - Linux OS Vulnerabilities - Vulnerabilities of Embedded Oss.	7
3	Network hacking Dial-up, PBX, Voicemail and VPN hacking, Preparing to dial up, War-Dialing, Brute Force Scripting, PBX hacking, Voice mail hacking, VPN hacking, Network Devices: Discovery Autonomous System Lookup, Public Newsgroups, Service Detection, Network Vulnerability, Detecting Layer 2 Media.	7
4	Introduction to Cyber forensics Introduction to Traditional Computer Crime, Traditional problems associated with Computer Crime. Role of ECD and ICT in Cybercrime - Classification of Cyber Crime. The Present and future of Cybercrime, Cyber Forensics, Steps in Forensic Investigation, Forensic Examination Process, Types of CF techniques: Forensic duplication and investigation, Forensics Technology and Systems, Understanding Computer Investigation, Data Acquisition.	7
5	Evidence Collection and Forensics Tools Processing Crime and Incident Scenes – Digital Evidence, Sources of Evidence, Working with File Systems: Registry, Artifacts, Current Computer Forensics Tools, Software/ Hardware Tools :Forensic Suite, Acquisition and Seizure of Evidence from Computers and Mobile Devices, Chain of Custody- Forensic Tools	7
6	Analysis and Validation Validating Forensics Data , Data Hiding Techniques, Performing Remote Acquisition, Network Forensics, Email Investigations, Cell Phone and Mobile Devices Forensics , Analysis of Digital Evidence ,Admissibility of Evidence ,Cyber Laws in India , Case Studies	7
Total		39

List of Laboratory Experiments:	
Sr. No	Suggested Experiments
1	To study and implement session hijacking / man in the middle (MiTM) attack in a controlled virtual environment. Recommended Tools: Ettercap / Bettercap
2	To perform static data acquisition from Windows OS Recommended Tool: FTK Imager
3	To acquire live data from Windows OS Recommended Tool: FTK Imager, TCP Dump

Cy 75

4	Windows Recycle Bin Forensics
5	To perform analysis of Forensic Duplicates Recommended Tool: Autopsy, bulk Extractor
6	Data Carving using open source tools • Foremost • Scalpel • Jpegcarver
7	USB Device Forensics using • USBDeview • USB Detection
8	Restore the Evidence Image using EnCase Forensics Imager.
9	Generate a Timeline Report Using Autopsy
10	File inclusion attack simulation using dvwa, lamp stack in Debian .
11	To setup a NETAPI exploit and a persistent backdoor using Metasploit.
12	Case Study on Chain of Custody and Evidence Integrity Validation using Hash Values Recommended Tool: Hashdeep, md5sum

Any other experiment based on syllabus may be included, which would help the learner to understand topic/concept.

				25	-	-	15	10	25

Prerequisite:

1. Statistics for Engineers, linear algebra, and complex arithmetic
2. Programming C++/Python

Course Objectives: The objective of the course is

1. Locating and identifying specific objects within an image or video
2. Dividing an image into different segments or regions, each corresponding to different objects or areas
3. Understanding and analyzing movement or actions in a sequence of images
4. Gain proficiency in morphological operations and image restoration techniques to analyze and enhance image features effectively.

Course Outcomes: On completion of this course, learner will be able to

1. Apply various point processing techniques to enhance images and improve visual quality.
2. Understand spatial and frequency domain filtering for image smoothing and sharpening using Image Transforms.
3. Design feature detection techniques for edges, corners, and textures of the image.
4. Select Techniques for dividing images into meaningful parts using Morphological operation
5. Apply advanced image segmentation techniques, including thresholding, region-based segmentation, and boundary identification, to analyze and interpret digital images.
6. Understand the principles of motion analysis in computer vision

Handwritten signatures and initials in blue ink.

Detailed Syllabus		Duration
Unit	Description	
1	Fundamental Steps in Digital Image Processing Components of an Image Processing System, Image Sampling and Quantization, Some Basic Relationships Between Pixels	2
2	Image Enhancement (point processing) Image Negative, Thresholding, Gray- level slicing with and without background, power law and log transform, Contrast Stretching, Histogram equalization and Histogram Specification Image Enhancement in Spatial Domain (Neighbourhood processing): Low Pass and High Pass filtering for image enhancement, Basics of Spatial Filtering, Generating Spatial Filter Masks–Smoothing and Sharpening Spatial Filtering Image Transforms: 1-D DFT, 2-D Discrete Fourier Transform and Its Inverse, Some Properties of 2D DFT, Walsh -Hadamard, Discrete Cosine Transform, Haar Transform, Slant Transform Image Enhancement in Frequency Domain: The Basics of Filtering in the Frequency Domain, Smoothing and Sharpening frequency domain filters	11
3	Morphology: Erosion and Dilation, Opening and Closing, The Hit or-Miss Transformation. Restoration: Noise models – Mean Filters – Order Statistics – Adaptive filters –wiener filter. Corner and Interest Point detection: The Harris Interest Point Operator: Corner Signals and shifts for various geometric configuration, Performance with crossing point and Junctions	9
4	Point, Line, and Edge Detection Detection of Isolated Points, Line detection, edge models, basic and advance edge detection, Edge linking and boundary detection, Canny's edge detection algorithm	7
5	Thresholding Foundation, Role of illumination, Basic Global thresholding, Otsu's method Region Based segmentation: Region Growing, Region Splitting and merging, Relationships between pixels, Hough transform Region Identification: Chain code, simple geometric border representation Fourier Transform of boundaries, Boundary description using segment sequences	6
6	Motion: Optical Flow, Interpretation of Optical Fields, Using focus of expansion to avoid collision, Time to adjacency analysis, Basic difficulties with optical flow models, Stereo from Motion.	4
Total		39

List of Laboratory Experiments:	
Sr. No.	Suggested Experiments
1	Perform Geometric, Arithmetic and Logical operations on images
2	Implement Spatial Domain Image Enhancement using different Point Processing techniques
3	Implement Spatial Domain Image Enhancement using different Neighbourhood Processing techniques

4	Image contrast improvement using Histogram equalization
5	Image contrast improvement using Histogram Stretching.
6	Implement frequency domain Image Enhancement techniques
7	Apply operations like erosion, dilation
8	Apply operations opening, and closing to modify image shapes
9	Implement morphological operations on Image
10	Image Edge detection using basic and advanced techniques
11	Application of Harr transform in image processing
12	Perform Steganography operation
13	Apply Image Transform on the Image
14	Horn-Schunck Optical Flow
15	Implement Lucas-Kanade Optical Flow

Any other experiment based on syllabus may be included, which would help the learner to understand topic/concept.

Prerequisite:

1. Introduction to Internet of Things
2. IoT Architecture and Protocol

Course Objectives: The objectives of the course are

1. To understand the key skills of Industrial IoT and Applications.
2. To analyse the suitable Industrial Internet Architecture Framework with modern communicational protocols.
3. To explore IP, Non-IP IOT protocols and Business models used in IIoT deployments.
4. To Implement IIoT Data Analytics and Applications of IIoT in robotics.

Course Outcomes: On completion of this course, learner will be able to

1. Present key skills used in the IIoT manufacturing and Embedded systems applications.
2. Design suitable network architecture with Industrial Ethernet and Gateways.
3. Introduced operating systems, Networking and wireless communication protocols used in IIoT deployments.
4. Comprehend different protocols and Business models for Industrial Internet of Everything.
5. Deployment of IIoT Data Analytics by using Machine Learning algorithms.
6. Implement cloud-enabled robotics Applications of IIoT in robotics.

Detailed Syllabus

1	Introduction of IIoT: Market Size and Potential Definition IoT v IIoT, Next Generation Sensors, Sensor's calibration and validate sensor measurements, placement of IoT devices, Industrial Internet, Impact of Industrial Internet, Industrial Sensing, low-cost communication	07

(Handwritten signatures)

	system design, Top application areas include manufacturing, oil & gas, Embedded systems in the Automotive and Transportation market segment.	
2	Industrial Internet Architecture Framework Functional Viewpoint, Operational Domain, Information Domain, Application Domain, Business Domain, Implementation View point, Architectural Topology, Three Tier Topology, Data Management, Field Bus Technologies, Modern Communication Protocols, Industrial Ethernet, Industrial Gateways.	07
3	IIoT Methodology Industrial Processes-Features of IIoT for Industrial processes, Top operating systems used in IIoT deployments, Networking and wireless communication protocols used in IIoT deployments. Smart Remote Monitoring Unit, components of monitoring system, control and management, Wireless Sensor Network (WSN).	06
4	Protocols and Architecture of IIoT WPAN, NFC, WebSockets, Wireless HART Protocol, IP and Non-IP Protocols, Z-Wave, NB-IoT, Business Models of IIoT, Categorization of reference architecture in IIoT, introduction to Interoperable Industrial Internet of Things (IIRA), IIRA-Framework.	06
5	IIoT Data Analytics Categorization of analytics- IIoT and Industry 4.0 context, Usefulness of IIoT analytics, implementation of industrial IoT Data flow, Deployment of analytics, big data and how to prepare data for machine learning algorithms, Machine Learning algorithms-supervised learning & Un-supervised learning algorithms, Applications of ML in Industries, Healthcare Applications in industries.	07
6	Internet of Robotic Things (IoRT) Introduction to stationary and mobile robots, Brief introduction to localization, mapping, planning, and control of robotic systems; Introduction to cloud-enabled robotics; Applications of IIoT in robotics; Architectures for IoRT, Examples and case studies: Open issues and challenges.	06
Total		39

List of Laboratory Experiments	
Sr. No.	Suggested Experiments
1	To implement an Autonomous Inventory Management System Using IIoT.
2	To Design a Smart Warehouse System using Industrial IoT and RFID.
3	To Perform Monitoring and Controlling Industrial Equipment using IIoT Sensors.
4	To design Smart Factory Automation with IIoT-Based Wireless Sensor Networks.
5	To analyse cybersecurity risk assessment for safeguarding industrial IoT (IIoT) environments.
6	To develop an Edge Computing Solution for Industrial IoT Applications.
7	To perform Predictive Analytics for Industrial Energy Management using IoT Data.
8	To perform IIoT-Based Environmental Monitoring in Manufacturing Plants.
9	To deploy sensors to monitor machine health parameters (vibration, temperature, pressure).

[Handwritten signatures]

10	To analyse Industrial IoT Device Calibration and Data Transmission using MQTT.
11	To analyse Fault Detection in Industrial Systems Using IoT and AI Techniques.
12	To analyse Remote Condition Monitoring of Power Grids using IIoT Solutions.
13	To perform a system to monitor the location and condition of products in real-time application using Technologies like Wi-Fi (Indoors: 30–50 meters), Bluetooth (10 meters) and LoRaWAN (Urban areas: 3–5 kilometers).
14	To perform Industrial Robotics Control through IoT-Based Network using protocols like MQTT or HTTP.
15	Mini Project (Students with group of 3/4 will develop application based on Industrial Internet of Thing along with Report).

Any other experiment based on syllabus may be included, which would help the learner to understand topic/concept.

Evaluation Scheme:

Semester End Examination (A):

Theory:

1. Question paper will be based on the entire syllabus summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

Laboratory:

Oral examination will be based on the entire syllabus including, the practical performed during laboratory sessions.

Continuous Assessment (B):

Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 03 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading

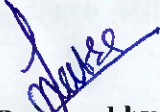

Laboratory: (Term work)

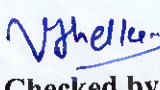

Term work shall consist of minimum 8 experiments.

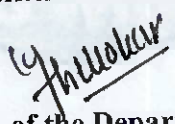

The distribution of marks for term work shall be as follows:

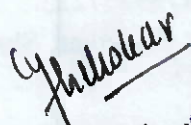

- i. Laboratory work (Performance of Experiments): 15 Marks
- ii. Mini Project (Implementation and Report): 10 marks

The final certification and acceptance of term work will be subject to satisfactory performance of laboratory work, and upon fulfilling minimum passing criteria in the term work.

Prerequisite:

Secure Software Engineering

Course Objectives: The objectives of the course are

1. Practices that support the production of quality software
2. Software testing techniques and quality models
3. Life-cycle models for requirements, defects, test cases, and test results
4. Process models for units, integration, system, and acceptance testing

Course Outcomes: On successful completion of this course learner will be able to

1. Use various Software testing techniques to produce quality software.
2. Design process models for units, integration, system, and acceptance testing
3. Construct and Analyze Control Flow Graphs and Data Flow Graph.
4. Apply System Testing and Functional Testing Techniques
5. Design and develop automated test case.
6. Identify various Quality Models

Detailed Syllabus		
Unit	Description	Duration
1	Introduction Software Quality, Role of testing, verification and validation, objectives and issues of testing, testing activities and levels, Sources of Information for Test Case Selection, Introduction to Testing techniques, Introduction to Testing strategies, Test Planning and Design, Monitoring and Measuring Test Execution, Test Tools and Automation, Test Team Organization and Management.	04

Prerequisite:

Basic concepts of Management

Course Objectives:

1. To familiarize the students with the use of a structured methodology/approach for every unique project undertaken, utilizing project management concepts, tools and techniques.
2. To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

Course Outcomes: On completion of this course, learners will be able to

1. Explain project management life cycle and the various project phases as well as the role of project manager.
2. Apply selection criteria and select an appropriate project from different options.
3. Create a work breakdown structure for a project and develop a schedule based on it. Manage project risk strategically.
4. Use Earned value technique and determine & predict status of the project.
5. Capture lessons learned during project phases and document them for future reference.

Detailed Syllabus		
Unit	Description	Duration
1	Project Management Foundation Definition of a project, Project Vs Operations, Necessity of project management, Triple constraints, Project life cycles (typical & atypical) Project phases and stage gate process. Role of project manager, Negotiations and resolving conflicts, Introduction to project leadership, ethics in projects, Multicultural and virtual projects, Project management in various organization structures, PM knowledge areas as per Project Management Institute (PMI).	07

(Handwritten signature)

2	Initiating Projects How to get a project started, selecting project strategically, Project selection models (Numeric /Scoring Models and Non-numeric models), Project portfolio process, Project sponsor and creating charter, Effective project team, Stages of team development & growth (forming, storming, norming & performing), team dynamics.	08
3	Project Planning Work Breakdown structure (WBS) and linear responsibility chart, Project cost estimation and budgeting, Top down and bottoms up budgeting. Networking and Scheduling techniques, PERT, CPM, Crashing project time, Resource loading and levelling, Goldratt's critical chain, GANTT chart, Project Stakeholders and Communication plan, Introduction to Project Management Information System (PMIS). Risk Management in projects: Risk management planning, Risk identification and risk register, Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks.	10
4	Monitoring and Controlling Projects Planning monitoring and controlling cycle, Information needs and reporting, engaging all stakeholders of the projects, communication and project meetings. With Earned Value Management techniques for measuring value of work completed, using milestones for measurement, change requests and scope creep, Project audit. Project Contracting Project procurement management, contracting and outsourcing.	07
5	Closing the Project Customer acceptance, Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process of project termination, completing a final report, doing a lessons learned analysis, acknowledging successes and failures.	07
Total		39

Course Objectives:

1. To introduce the students with basic concepts, techniques and practices of the human resource management.
2. To provide opportunity of learning Human resource management (HRM) processes, related with the functions, and challenges in the emerging perspective of today's organizations.
3. To familiarize the students about the latest developments, trends & different aspects of HRM.
4. To acquaint the student with the importance of inter-personal & inter-group behavioral skills in an organizational setting required for future stable engineers, leaders and managers.

Course Outcomes: On completion of this course, learner will be able to

1. Understand the key concepts, aspects, techniques and practices of the human resource management.
2. Apply Principles of Organizational Behavior to analyze the impact of personality, perception, and motivation on individual behavior and decision-making within organizations.
3. Evaluate Group Dynamics and Team Effectiveness
4. Analyze Strategic HRM and Organizational Structure
5. Demonstrate knowledge of basic labor laws and current trends in HRM, including diversity management and the role of technology in shaping the future of work.

Detailed Syllabus		
Unit	Description	Duration
1	Introduction to HR Human Resource Management- Concept, Scope and Importance, Interdisciplinary Approach Relationship with other Sciences, Competencies of HR Manager, HRM functions. Human resource development (HRD): changing role of HRM. Human resource Planning, Technological change, Restructuring and rightsizing. Empowerment, TQM, Managing ethical issues.	07
2	Organizational Behaviour (OB) Introduction to OB Origin, Nature and Scope of Organizational Behaviour, Relevance to Organizational Effectiveness and Contemporary issues. Personality: Meaning and Determinants of Personality, Personality development, Personality Types, Assessment of Personality Traits for Increasing Self Awareness. Perception: Attitude and Value, Effect of perception on Individual Decision-making. Attitude and Behaviour. Motivation: Theories of Motivation and their Applications for Behavioural Change (Maslow, Herzberg, McGregor); Group Behaviour and Group Dynamics: Work groups formal and informal groups and stages of group development, Team Effectiveness: High performing teams, Team Roles, cross functional and self-directed team. Case study.	08
3	Organizational Structure & Design Structure, size, technology, Environment of organization; Organizational Roles & conflicts: Concept of roles; role dynamics; role conflicts and stress. Leadership: Concepts and skills of leadership, Leadership and managerial roles, Leadership styles and contemporary issues in leadership. Power and Politics: Sources and uses of power, Politics at workplace, Tactics and strategies.	08
4	Human resource Planning Recruitment and Selection process, Job-enrichment, Empowerment-Job Satisfaction, employee morale. Performance Appraisal Systems: Traditional & modern methods, Performance Counselling. Career Planning. Training & Development: Identification of Training Needs, Training Methods. Strategic HRM: Role of Strategic HRM in the modern business world, Concept of Strategy, Strategic Management Process, Approaches to Strategic Decision Making: Strategic Intent-Corporate Mission, Vision, Objectives and Goals.	08
5	Labor Laws & Industrial Relations: Evolution of IR, IR issues in organizations, Overview of Labor Laws in India; Industrial Disputes Act, Trade Unions Act, Shops and Establishments Act. Emerging Trends in HR Organizational development; Business Process Re-engineering (BPR), BPR as a tool for organizational development, managing processes & transformation in HR. Organizational Change, Culture, Environment. Cross Cultural Leadership and Decision Making: Cross Cultural Communication and diversity at work, Causes of diversity, managing diversity with special reference to handicapped, women and ageing people, intra company cultural difference in employee motivation.	08

Evaluation Scheme:

Semester End Examination (A):

Theory:

1. Question paper based on the entire syllabus will comprise of 5 questions (All compulsory, but with internal choice as appropriate), each carrying 15 marks, total summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

Continuous Assessment (B):

Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.

				Laboratory Examination			Term work		Total Term work
				Oral	Practical	Oral & Practical	Laboratory Work	Tutorial / Mini project / presentation / Journal	
3	-	-	3	-	-	-	-	-	-

Prerequisite:

1. Basic Knowledge of Algebra
2. Probability and Statistics.

Course Objectives:

1. Overview of Indian financial system, instruments and market.
2. Basic concepts of value of money, returns and risks, corporate finance, working capital and its management.
3. Knowledge about sources of finance, capital structure, dividend policy.

Course Outcomes: On completion of this course, learner will be able to

1. Understand Indian finance system.
2. Apply concepts of time value money and risk returns to product, services and business.
3. Understand corporate finance; evaluate and compare performance of multiple firms.
4. Take Investment, finance as well as dividend decisions.

Detailed Syllabus

Unit	Description	Duration
01	Overview of Indian Financial System Characteristics, Components and Functions of Financial System. Financial Instruments: Meaning, Characteristics and Classification of Basic Financial Instruments Equity Shares, Preference Shares, Bonds-Debentures, Certificates of Deposit, and Treasury Bills. Financial Markets: Meaning, Characteristics and Classification of Financial Markets - Capital Market, Money Market and Foreign Currency Market Financial Institutions: Meaning, Characteristics and Classification of Financial Institutions-Commercial Banks, Investment-Merchant Banks and Stock Exchanges	07

02	Overview of Corporate Finance Objectives of Corporate Finance; Functions of Corporate Finance Investment Decision, Financing Decision, and Dividend Decision. Financial Ratio Analysis: Overview of Financial Statements Balance Sheet, Profit and Loss Account, and Cash Flow Statement; Purpose of Financial Ratio Analysis; Liquidity Ratios; Efficiency or Activity Ratios; Profitability Ratios; Capital Structure Ratios: Stock Market Ratios; Limitations of Ratio Analysis	08
03	Concepts of Returns and Risks Measurement of Historical Returns and Expected Returns of a Single Security and a Two-security Portfolio; Measurement of Historical Risk and Expected Risk of a Single Security and a Two-security Portfolio. Time Value of Money: Future Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Present Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Continuous Compounding and Continuous Discounting.	07
04	Working Capital Management Concepts of Meaning Working Capital; Importance of Working Capital Management; Factors Affecting an Entity's Working Capital Needs; Estimation of Working Capital Requirements; Management of Inventories; Management of Receivables; and Management of Cash and Marketable Securities. Capital Budgeting: Meaning and Importance of Capital Budgeting; Inputs for Capital Budgeting Decisions; Investment Appraisal Criterion-Accounting Rate of Return, Payback Period, Discounted Payback Period, Net Present Value(NPV), Profitability Index, Internal Rate of Return (IRR), and Modified Internal Rate of Return (MIRR).	09
05	Capital Structure Factors Affecting an Entity's Capital Structure; Overview of Capital Structure Theories and Approaches Net Income Approach, Net Operating Income Approach; Traditional Approach, and Modigliani-Miller Approach. Relation between Capital Structure and Corporate Value; Concept of Optimal Capital Structure Dividend Policy: Meaning and Importance of Dividend Policy; Factors Affecting an Entity's Dividend Decision; Overview of Dividend Policy Theories and Approaches- Gordon's Approach, Walter's Approach, and Modigliani-Miller Approach	08

3	-	-	3	-	-	-	-	-	-

Course Objectives:

1. To acquaint with the concept of key drivers of supply chain performance and their inter-relationships with strategy.
2. To acquaint with the design problems and develop an understanding of information technology in supply chain optimization.
3. To acquaint with the complexity of inter-firm and intra-firm coordination in implementing programs such as e-collaboration, quick response, jointly managed inventories and strategic alliances.

Course Outcomes: On completion of this course, learner will be able to:

1. Demonstrate the functional strategy map of supply chain management.
2. Analyze the determinants of Supply Chain and Transportation networks design.
3. Demonstrate the need of coordination and sourcing decisions in supply chain.
4. Understand pricing, revenue management and role of IT in supply chain.
5. Gain knowledge of various sustainability aspects of a supply chain.

Detailed Syllabus		
Unit	Description	Duration
01	<p>Understanding the Supply Chain: Objective, Importance, Decision Phases, Process Views.</p> <p>Achieving Strategic Fit and Scope: Competitive and Supply Chain Strategies, Achieving Strategic Fit, Expanding Strategic Scope, Challenges to Achieving and Maintaining Strategic Fit.</p> <p>Supply Chain Drivers and Metrics: Financial Measures of Performance, Drivers of Supply Chain Performance, Framework for Structuring Drivers, Facilities, Inventory, Transportation, Information, Sourcing, Pricing.</p>	08

Course Objectives:

1. Understanding, defining and differentiating different types of intellectual properties (IPs)
2. Assessing different IP management (IPM) approaches
3. Exposure to the Legal management of IP and understanding of real life practice of IPM.
4. Understanding post-grant processes related to Intellectual Property.

Course Outcomes: On completion of this course, learner will be able to

1. Recognize the crucial role of IP for the purposes of product and technology development.
2. Understand how and when to file a patent.
3. Apply the knowledge to understand the entire ecosystem.
4. Derive value from IP and leverage its value in new product and service development.
5. Identify appropriate Intellectual Property Right for a creation.

Detailed Syllabus		
Unit	Description	Duration
1	Concept of Intellectual Property Law Idea/ Expression dichotomy, Introduction and the need for intellectual property right (IPR), Intellectual Property laws, IPR in India: Genesis and development, IPR abroad, Major International Instruments concerning Intellectual Property Rights: Paris Convention, the Berne Convention, the Universal Copyright Convention, the WIPO Convention, the Patent Cooperation Treaty, the TRIPS Agreement, incentive theory, Types of IPR, India's New National IP Policy, 2016, Govt. Schemes in IPR IP	6

(Handwritten signature)

2	Patents and Trademarks Elements of Patentability: Novelty, Non-Obviousness, Industrial Application, Non-Patentable Subject Matter, Registration Procedure, Rights and Duties of Patentee, Assignment and License, Restoration of Lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties, Patent Office and Appellate Board, Case Study of Existing Patents related to software, healthcare, devices. Concept of Trademarks, Different Kinds of Marks: (Brand names, Logos, Signatures, Symbols, Well-known marks, Certification marks, Service marks), Non-Registrable Trademarks, Registration of Trademarks, Rights of Holder and Assignment and Licensing of Marks, Infringement, Remedies & Penalties, Trademarks Registry and Appellate Board.	11
3	Copyrights and Design Copyrights: Nature, Subject Matter: original literary, dramatic, musical, artistic works, cinematograph films and sound recordings, Registration Procedure, Term of protection, Ownership of copyright, Assignment and licence of copyright, Infringement, Remedies & Penalties, Related Rights, Distinction between related rights and copyrights. Design: Meaning and concept of novel and original, Procedure for registration, Effect of registration and term of protection.	9
4	GI, PVP, and LDP Geographical Indication (GI): Meaning, difference between GI and trademarks, procedure for registration, effect of registration, and term of protection. Plant Variety Protection (PVP): Meaning, benefit sharing, farmers' rights, procedure for registration, effect of registration, and term of protection. Layout Design Protection (LDP): Meaning, procedure for registration, effect of registration, and term of protection.	8
5	Beyond IP Introduction to Competition Law: concept of competition, relationship and interaction between IPR and competition law, IP and competition issues, Technology transfer agreements. EU experience with IP and Competition Law, Indian Competition Act and IPR protection, IPR issues in merger and acquisition, Harmonization of IP protection and competition Law in India	5
