

Dear Khavekar sir,

We value our partnership with DJ Sanghvi and the support extended to each other over the years. We have successfully engaged with Students/Faculty to create a mind share about TCS and help enhance the quality of emerging workforce.

TCS has been visiting the institute for many years and the quality of students hired has been constantly scaling up. The students have always impressed us with their enthusiasm, communication skills and professional demeanor. We have many students from the institute doing great work in TCS across locations.

Their participation and performance in all 3 of our contests has been impressive and every year we have had many students from the institute in the top rankers of our contests spanning different spaces of IT from Coding to Testing to Hardware Software integration. Some of these contests have been on global platforms where the students have been able to attain top ranks among the registered students from across different countries.

I must mention that the vision, hard work and dedication of the teaching staff and management has been instrumental in shaping the overall development of the students. This foresight has helped the institute make a mark as one of the best institutes in the region.

The over emphasis on Academia Industry relations and the partnerships that the institute has had with multitude of organizations have helped shaping industry ready student community over the years.

Institute has also been supportive of TCS Academic Interface Program (AIP) initiatives which has been instrumental in TCS conducting several student workshop and faculty development programs. AIP initiative conducted this year on "Mobility", "IPR and patenting Process", "Cloud Computing", "IBM Watson", "Making Learning stick". "Postgre SQL" and "Machine Learning" has resulted in increasing the industry orientation of the institute stakeholders. Increased interaction has also helped students and faculties be more aware about the latest trends and technologies existing in the IT industry and bridge the gap.

Over the last years, the institute has been supportive in conducting 23 Academic Interface Programs in order to enhance the skills at an individual level. Some of the workshops include "Big Data and Hadoop", "Introduction to IoT", "IoT ecosystem and use cases", etc to name a few.

We are extremely happy to be partnering with DJ Sanghvi. Wishing you all the best.

Thanks & Regards
