**Continuous Assessment (A):**

Course	Assessment Tools	Marks	Time (hrs.)
Theory	One Term test (based on 40 % syllabus)	25 each (Avg.25)	1
	Second Term test (next 40 % syllabus ) / presentation / assignment / course project / group discussion / any other		as applicable
Audit course	Performance in the assignments / quiz / power point presentation / poster presentation / group project / any other tool.	--	
Laboratory	Performance in the laboratory and documentation	25	
Tutorial	Performance in each tutorial & / assignment	25	
Laboratory & Tutorial	Performance in the laboratory and tutorial.	25	

**Semester End Assessment (B):**

Course	Assessment Tools	Marks	Time (hrs.)
Theory / * Computer based	Written paper based on the entire syllabus	75	3
	* Computer based assessment in the college premises		
Oral	Questions based on the entire syllabus	25	as applicable
Practical	the output / results obtained	25	2
Oral & Practical	Project based courses - Performance of the practical assigned during the examination and the output / results obtained Based on the practical performed during the examination and on the entire syllabus.	as per the scheme	2

**Honors in Smart Computing**

**T. Y. B.Tech.**

**Semester: V**

**Program: B.Tech. CSE in IoT and Cyber Security withBlockchain  
Technolog**

**Pre-requisite:**

1. Introduction to IoT
2. Computer Networks

**Objectives:**

1. To understand the fundamental principles and concepts of smart technologies.
2. To identify different types of smart technologies and their applications.
3. Analyze the impact of smart technologies on society, economy, and environment.
4. Develop critical thinking and problem-solving skills related to smart technologies

**Outcomes:** On completion of the course, learner will be able to:

1. Demonstrate the knowledge of design of smart computing and its applications.
2. Describe different types of smart technologies
3. Explore IoT, artificial intelligence (AI) and machine learning (ML) techniques used in smart technologies.
4. Analyze and evaluate real-world case studies of smart technology implementations in various domains.

<b>Detailed Syllabus: (unit wise)</b>		
<b>Unit</b>	<b>Description</b>	<b>Duration</b>
<b>1</b>	<b>Introduction to Smart Technologies</b> Definition and characteristics of smart technologies, Evolution of smart technologies, Overview of smart technologies and their significance in smart computing, Key components of smart systems, The Five A's Of Smart Computing, Examples of smart computing, Challenges and opportunities in smart technologies, Emerging trends in smart technologies	<b>06</b>
<b>2</b>	<b>Smart Devices and Services :</b> Smart Devices and Service properties, Smart mobile devices and Users, Mobile code, Smart Card Devices and Networks, Service Architecture	<b>07</b>

	Models. Service Provision Lifecycle. Virtual Machines and Operating Systems, OS for Mobile Computers and Communicator Devices.	
<b>3</b>	<b>Ubiquitous Computing :</b> Concept of Ubiquitous Computing and Advantages, Ubiquitous Computing Applications and Scope, Properties of Ubiquitous Computing, Modelling the Key Ubiquitous Computing Properties. Ubiquitous System Environment Interaction. Architectural Design for UbiCom-Systems : Smart DEI Model.	<b>07</b>
<b>4</b>	<b>Integration of Smart Technologies:</b> Internet of Things (IoT) and its role in smart computing, Wearable and Personal Smart Devices, AI and ML techniques for smart technologies, Integration of smart devices and systems with existing infrastructure,	<b>04</b>
<b>5</b>	<b>Smart Technologies applications</b>  <b>Smart Cities and Urban Infrastructure:</b> Smart energy management and sustainable infrastructure, Smart transportation and mobility solutions, Case studies of successful smart city implementations <b>Artificial Intelligence (AI) in Smart Technology:</b> AI applications in smart computing, Natural language processing and voice recognition in smart devices, AI-based decision-making and automation in smart technology <b>Smart Technologies in Energy:</b> Smart grids and energy management, Renewable energy integration, Sustainable cities and smart buildings	<b>07</b>
<b>6</b>	<b>Future Trends and Innovations:</b> Edge computing and fog computing for smart systems, Blockchain technology for secure and decentralized smart systems , Cloud computing for smart technologies, Analysis of real-world smart technology implementations	<b>08</b>
	<b>Total</b>	<b>39</b>

## Evaluation Scheme:

### Semester End Examination (A):

Theory:

1. Question paper based on the entire syllabus will comprise of 5 questions (All compulsory, but with internal choice as appropriate), each carrying 15 marks, total summing up to 75 marks.
2. Total duration allotted for writing the paper is 3 hrs.

### Continuous Assessment (B):

Theory:

1. Two term tests of 25 marks each will be conducted during the semester out of which; one will be a compulsory term test (on minimum 02 Modules) and the other can either be a term test or an assignment on live problems or a course project.
2. Total duration allotted for writing each of the paper is 1 hr.
3. Average of the marks scored in both the two tests will be considered for final grading.
